Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mol. Biochem. Parasitol. 37, 235-246, 1989
Astitle: Characterization of the promastigote surface protease of Leishmania as a membra
A;Reference number: A60648; MUID:90114330; PMID:2608099 A; Molecule type: protein A; Residues: 101, E',103-118, SV',121-123 <BOU> A; Residues: 101, E',103-118, SV', 121-123 <BOU> A; Depertmental Source: Strain LEMS13 R; Schlagenhauf, E.; Erges, R.; Metcalf, P. submitted to the Brookhaven Protein Data Bank, March 1997 A; Reference number: A68135; PDB:1LML A; Contents: annotation; X-ray crystallography, 1.86 angstroms, residues 100-407,412-498, C; Complex: homodimer leishmanolysin (EC 3.4.24.36) precursor [validated] - Leishmania major
NyAlcernate names: promastigote surface proteinase; surface endopeptidase glycoprotein of Species: Leishmania major
C;Dete: Leishmania major

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                   775

E Structure 6:1035-1046(1998).

C -!- FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

C -!- FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

C -!- CATALYTIC ACTIVITY: Preference for hydrophobic residues at Pl and Pl' and basic residues at P2 and P3'. A model nonapeptide is cleaved at -Ala-Tyr- |-Leu-Lys-Lys-.

C -!- CORACTOR: Binds 1 zinc ion per subunit.

C -!- PTM: THE PHOSPHATIDYINOSITOR MOIETY OF THE GPI-ANCHOR CONTAINS A FULLY SATURATED, UNBRANCHED 1-O-ALKYL CHAIN (MAINIX C24:0) AND A MIXTURE OF FULLY SATURATED UNBRANCHED 2-O-ACYL CHAINS (C12:0, C14:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0, C16:0,

"Sigma S-dependent growth-phase induction of the csgBA promoter in
Escherichia coli can be achieved in vivo by sigma 70 in the absence
of the nucleoid-associated protein H-NS.";
Mol. Microbiol. 13:1021-1032(1994).
-! FUNCTION: CURLIN IS THE STRUCTURAL SUBUNIT OF THE CURLI. CURLI ARE
COILED SURFACE STRUCTURES THAT ASSEMBLE PREFERENTIALLY AT GROWTH
TEMPERATURES BELOW 37 DEGREES CELSIUS. CURLI CAN BIND TO
FIBRONECTIN. THE MINOR SUBUNIT IS THE NUCLEATION COMPONENT OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 STRAIN=0157:H7 / RIMD 0509952;

                                                                                                                                                                                                                                                                                                                     151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -:- FUNCTION: Item nucleation proteins enable bacteria to nucleate orystallization in supercooled water.
-:- SUBCELLULAR LOCATION: Outer membrane (By similarity).
-:- DOMAIN: CONTAINS MANY IMPERPECT REPEATS OF THE CONSENSUS OCTAPEPTIDE A-G-Y-G-S-T-X-T; FUNTHER ON A 16-RESIDUE AND A RECIONAL 48-RESIDUE PERIODICITY IS SUPERIMPOSED.
-:- SIMILARITY: Belongs to the bacterial ice nucleation protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;

Mol. Gen. Genet. 223:163-166(1990).

-! FUNCTION: Ice nucleation porterins enable bacteria to nucleate crystallization in supercooled water.

-! SUBCELUIAR LOCATION: Outer membrane (By similarity).

-! OWAIN: CONTAINS 153 IMPERFECT REPEATS OF THE CONSENSOS OCTAPERPTIDE A-G-Y-G-S-T-L-T; FURTHER ON A 16-RESIDUE AND A REGIONAL 48-RESIDUE PRRIODICITY IS SUGGESTED IN WHICH THE ICH NUCLEATION PROTEIN DISPLAYS A SYMMETRY RELATED TO THAT OF ICE.

-!- MISCELLANBOUS: A SITUATIONAL PROPERIOR DISPLAYED TO THAT OF ICE.

-!- SIMILARITY: Belongs to the bacterial ice nucleation protein
                                                                                                                                                                                                                                Xanthomonas campestris (pv. translucens).

Biotechnol. Biochem. 58:762-764(1994).

-! FUNCTION: Ice nucleation proteins enable bacteria to nucleate crystallization in supercooled water.

-! SUBCELLUIAR LOCATION: Outer membrane.

-! SUBCELLUIAR LOCATION: IMPERED REPEATS OF A CONSENSUS OCTAPERTIDE A-G-Y-G-S-T-X-T; PURTHER ON A 16-RESIDUE AND A REGIONAL 48-RESIDUE PERIODICITY IS SUPERIMPOSED.

-! NESCELLAMBOSED.

-NUCLEATION PROTEIN DISELAYS A SYMMETRY RELATED TO THAT OF ICE.

-! SIMILARITY: Belongs to the bacterial ice nucleation protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        161 İATYGSTLSGTHQSQLIAGYGSTETAGDSSTLIAGYGSTGTAGSDSTL-VAGYGSTQTA-

Blocked. Parasitol. 48:173-184(1991).

-!- FUNCTION: Has an integral role during the infection of macrophages in the mammalian host.

-!- CATALYTIC ACTIVITY: Preference for hydrophobic residues at P1 and P1, and basic residues at P2 and P3'. A model nonapeptide is P1, and basic residues at P2 and P3'. A model nonapeptide is COFACTOR: sinds 1 zinc lon per subunit (By similarity).

-!- SUBCELIULAR LOCATION: Attached to the membrane by a GPI-anchor.

-!- SIMILARITY: Belongs to peptidase family M8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
